Mobile Application Development:

Pubspec.yaml:

Pubspec.yaml file is a crucial configuration file that plays a central role in managing your flutter projects dependencies, assets and metadata.

1- Project name
2- Version control
3- Dependencies (libraries etc)
4- Assets
5- Flutter & Dart version.

Dependency:

It is a relationship b/w two or more components, where one component relies on another component to function properly.

Local storage:

Refer to store data on device rather than on a remote server.

API:

Stand for application programing interface. It is a set of defined rale that enable different application services, or system to communicate with each other.
